SIGNAL 75

A new scale can track post-exertional malaise in ME/CFS.

*Why this matters: *The Post Activity Symptom Scale (PASS) was developed and evaluated for measuring post-exertional malaise in Myalgic Encephalomyelitis/Chronic Fatigue Syndrome patients.**

KEEPING PACE WITH THE EVIDENCE

SWIPE →

TUG, gait speed, and grip strength have limited ability to identify fallers.

*Why this matters: *This cohort study investigated associations and discriminative performance of Timed Up and Go, gait speed, and grip strength for falls in community-dwelling older adults.**
